

REFERENCE PACK

One composition, every surface.

The same spec renders as HTML, markdown, text, Slack, and SVG.

Primitive pack

Vocabulary, renderers, and validation in one value.

WHAT A PACK DECLARES

- Primitives
- Surfaces
- Theme bound

Six render targets.

React, HTML, SVG, Slack, Markdown, and plain text.

01

React

Component tree; hosts mount it.

02

HTML

Self-contained envelope with stylesheet.

03

SVG

The same tree and stylesheet, handed to a rasterizer.

04

Slack

Block Kit blocks with fallback text.

05

Markdown

GitHub-flavored, readable in terminals.

06

Text

80-column output for logging and alerts.

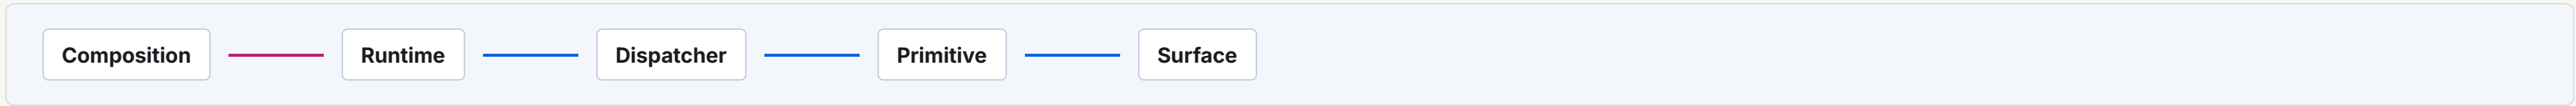

The composition contract.

COMPOSITION

```
const spec: Composition = {  
  type: "view",  
  title: "My view",  
  body: [node],  
};
```

How a composition renders.

RENDER PIPELINE

HOST
Supplies composition, owns data and routing.

ISOMER
Owns dispatch, validation, and rendering.
